Login failed for user 'IIS APPPOOLClassic .NET AppPool'

October 12, 2009 asp.net, development, website, windows

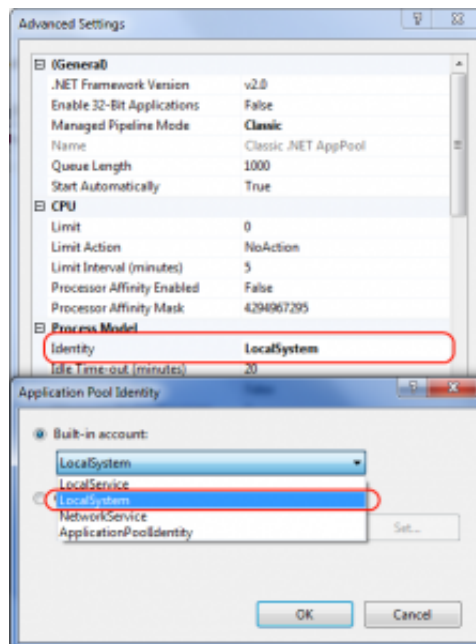

Have you just installed Windows 7 or Windows Server 2008 R2 and when you tried to setup your asp.net/mssql website you got following error: "Login failed for user 'IIS APPPOOLClassic .NET AppPool'"?

It seems that new IIS version 7.5 runs its Classic .NET AppPool process with a different identity, and from there we get error "Login failed for user 'IIS APPPOOLClassic .NET AppPool'".

Solution

- go into Internet Information Services (IIS) Manager
- expand node with your computer name on left side and select "Application Pools"
- now in the window on the right side, right click "Classic .NET AppPool" and select "Advanced Settings..."

- find “Identity” property and change its value to “LocalSystem”

Sweet, thanks! First google hit too, saved me tons of time! At first I thought my export/import of logins from SQL Server A to SQL Server B goofed. Nope, it was just this setting.

Seems to me it is a serious security problem. Never give Local System user permission to a web service.

March 22, 2012 at 5:54 pm

Thanks guy, you help me wonderful. You are a genius; thanks very much.
